sambaXP Conference

Microsoft Interoperability Track

Integrate the Power of Office365 through Co-Auth and File Synchronization Protocols

Jinlin Xu
Principle Software Engineer

Agenda

Office Online Introduction

WOPI Protocol Overview

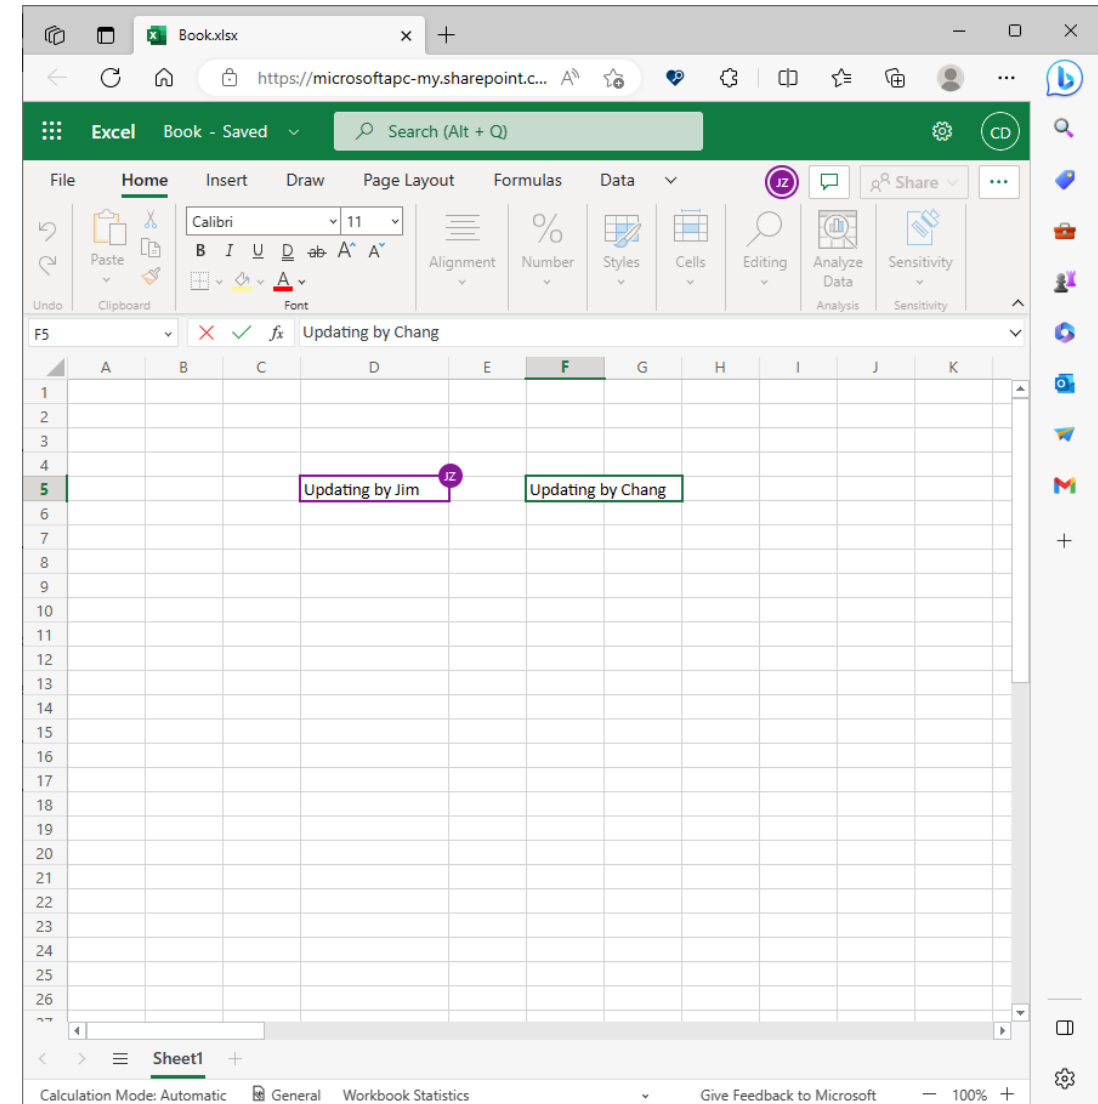

FSSHTTP Protocol Family Overview

Resources

Office Online

Work and share Office files from anywhere with an internet connection from any device

Combines commonly used Office features and real-time co-authoring capabilities

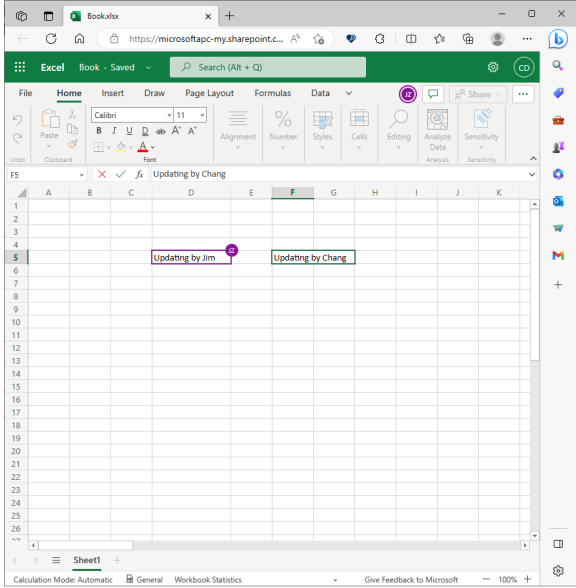

How Office Online Works

WOPI – Why You Care

Web Browser (or App)

Office Online Server

Microsoft Document Hosts

3rd Party Document Hosts

MS-WOPI Protocol

Defines a set of operations that enables a client to access and update files stored on a file storage

Describes the communication between the Office Online Server and a WOPI Server

MS-WOPI Most Important Operations

WOPI Discovery – Negotiate the capacities

File Metadata Operations – Delete, Rename, FileInfo

File Content Operations – GetFile, PutFile

Lock – Lock, Unlock, RefreshLock

FSSHTTP

Empower Cloud based documents

- Multi-user/Co-authoring
- Incremental file sync
- Save the network cost and server I/O cost

Multi-user/Co-authoring - Locks

Traditional Exclusive Lock

- Single writer, multiple readers
- Used for single user editing

Shared Lock

- Many writers
- Ensure co-authoring capable and non-capable clients interact

FSSHTTP – Object Graph

File Contains one or more “Cells”

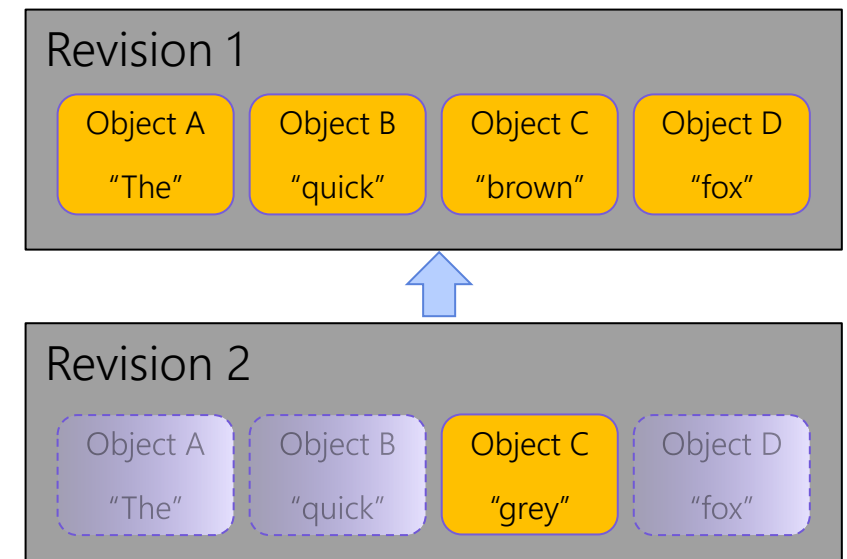

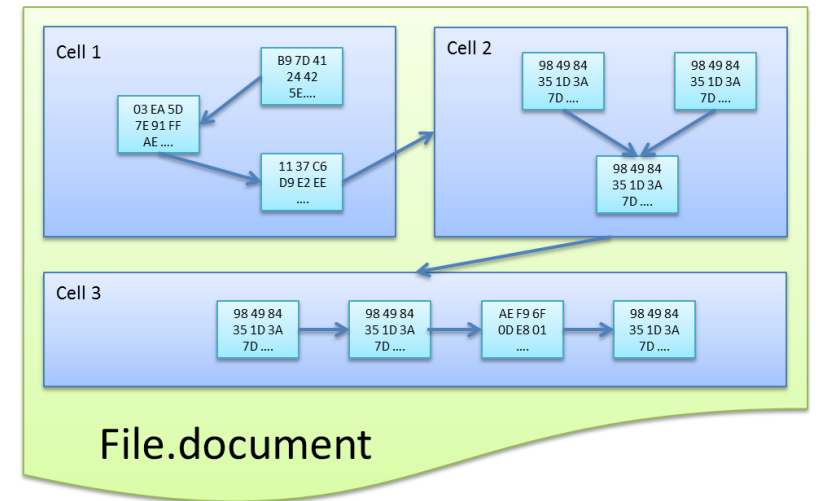

- Unit of lock

Cells contain one or more “Objects”

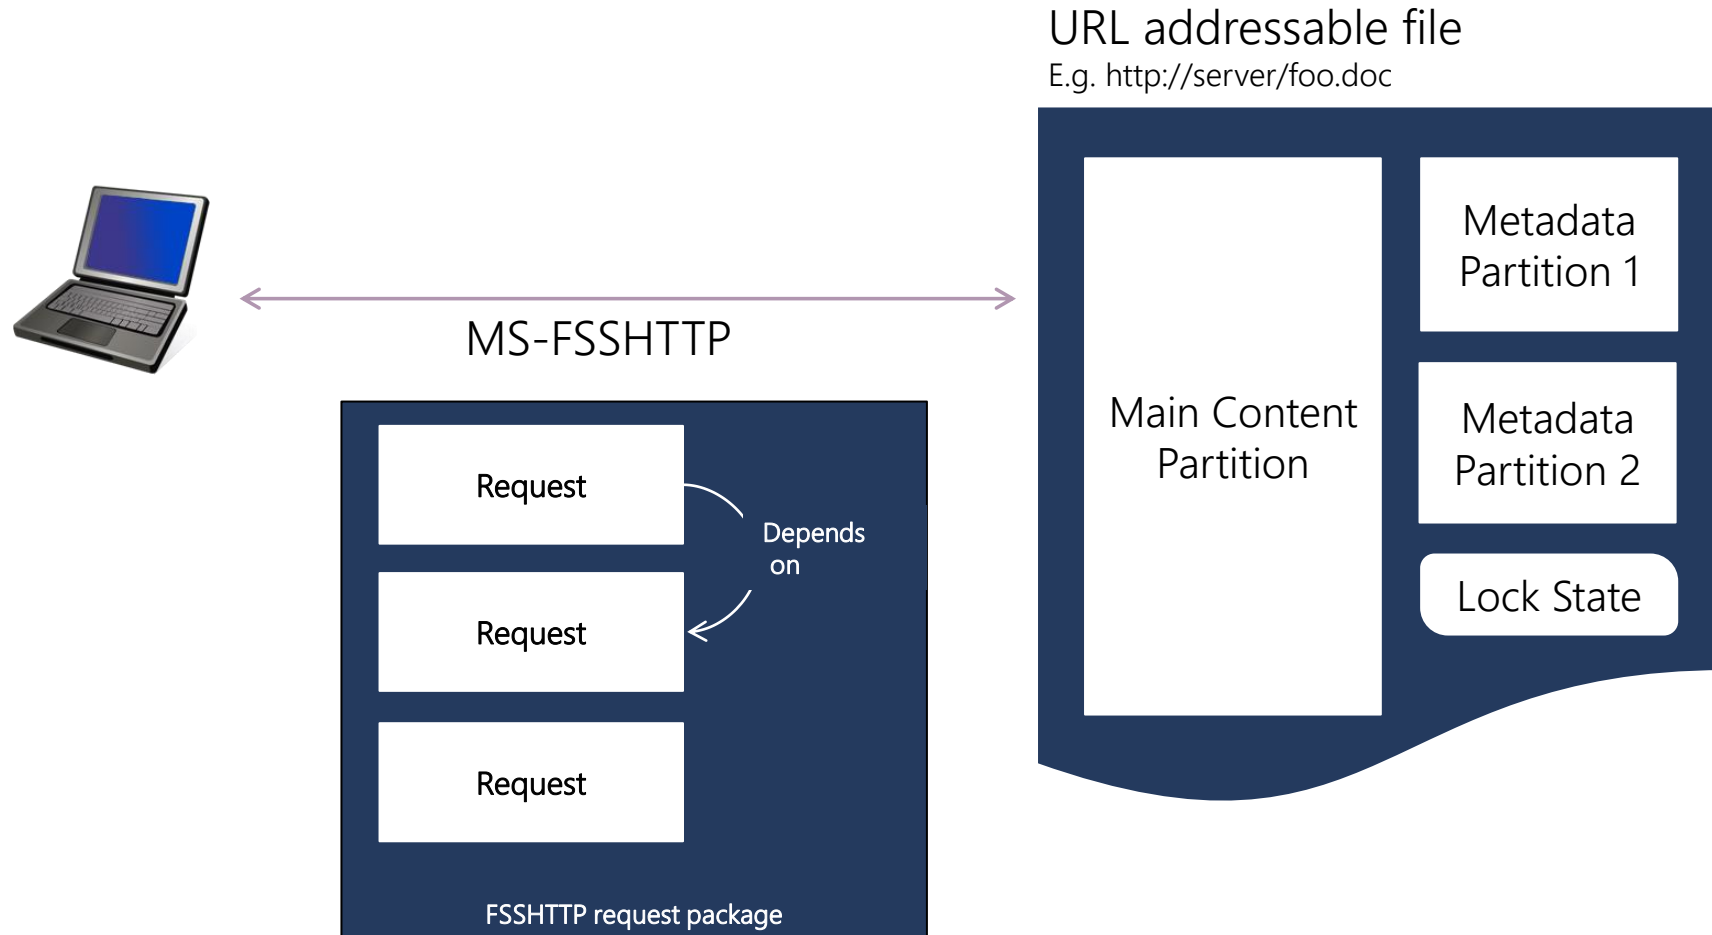

- Cell contains “Revision” State

Objects contain data and references to other objects and/or cells

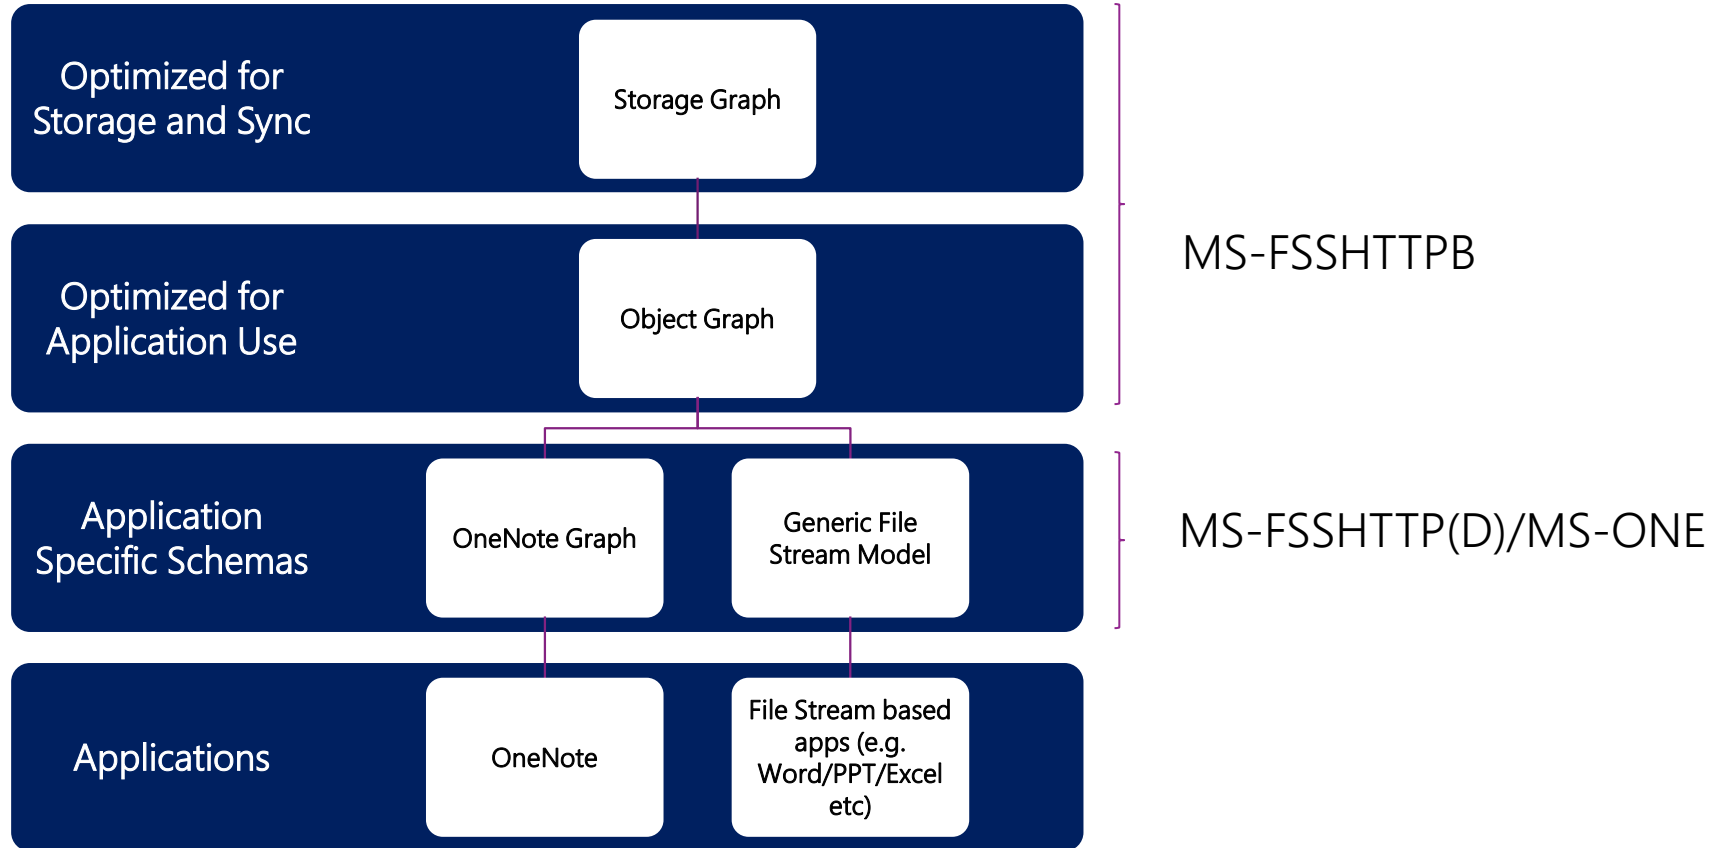

- Unit of change

MS-FSSHTTP Protocol

FSSHTTP Other Protocols
